

Product Name :
Heat Exchanger Element Direct Expansion Coil

Product Code :
ELABBAT0015

Description :

Heat Exchanger Element Direct Expansion Coil

Technical Specification :

Heat Exchanger Element Direct Expansion Coil Technical Description The heat transfer element enables investigations to be performed on a refrigerant evaporator in the unit. For this purpose the component is inserted in the air duct in the base unit using quick action fasteners. The refrigerant connections on the evaporator are self-sealing so that no refrigerant can escape. The Refrigerant Condensing Unit is necessary for the operation of the evaporator. Refrigerant condenser and evaporator together form a complete refrigerant circuit. The temperatures at the evaporator inlet and outlet are measured using dial thermometers.
