Microprocessor Spectrophotometer is a solid state microcontroller based instrument designed for quick and accurate spectrophotometric analysis of any concentration.
It operates at a wavelength range of 320 nm to 1100 nm.
The instrument uses the latest microprocessor technology and advanced engineering techniques so as to give enhanced accuracy and reproducibility.

The instrument is equipped with 128 x 64 dots graphical lcd the makes the result easy to read. User can on-screen see the standard curve.
The system has soft touch numeric keys with complete numeric key that provides a convenient interface for entering numeric values.
The Provision has also been made for attachment of any dot matrix printer using centronics interface and PC connectivity through USB port.

The 'Basic' PC software is supplied with the instrument.
System has a 4-Position rapid cuvette changer (Test Tube Holder) selector.
