

Product Name :
Disintegration Test Apparatus

Product Code :
ELABANALYTICAL0026

Description :

Disintegration Test Apparatus

Technical Specification :

Digital timer with 1 second resolution
Accurate time out provided by microprocessor based time totalizer
Baskets move Up & Down as per IP/USP test specifications
Temperature Controlled by sensitive thermostats

Digital Tablet Disintegration Apparatus accurate estimation of disintegration time of tablets as per IP/USP standards.

The instrument is designed to test tow batches of six tablets, simultaneously.

The unit consists of two beakers having capacity of 1000 cc each.

In these beakers, suitable disintegration media can be taken.

These can be temperature controlled using a in-built heater and a highly thermostat fitted inside the instrument. Microprocessor based time totalizer is provided for accurate time readout.

System: Digital Tablet Disintegration Apparatus

Up and Down Speed: 30 rpm \pm 2 rpm

Accuracy: 2%

Resolution: 1 sec.

Operating Temp. Range: 0 - 100°C

Power: 230V \pm 10%, 50Hz.AC
