

Product Name :
Core Cutter Apparatus

Product Code :
Soil Testing0011

Description :

Core Cutter Apparatus

Technical Specification :

The Core Cutter Apparatus is used for determination of in situ dry density of natural or compacted fine grained soil, free from aggregates. A cylindrical cutter is used to extract a sample of the soil with the help of a dolly and tamping. From the weight, density and the moisture, and dry density of the soil is ready calculated. It consists one each of cylindrical core cutter made of steel, 127.2mm Long and 100mm internal diameter. Steel dolly, 25mm high with a lip to enable it to be locked on top of the core cutter, tamping with detachable steel rod.
