

Product Name :
Distributor Ignition System Trainer

Product Code :
THEM0004

Description :

Distributor Ignition System Trainer

Technical Specification :

The Distributor Ignition System Trainer is a training board used to teach the ignition system with distributor. The trainer consists of an Ignition coil distributor set of spark plugs & 12 V DC power supply. The components used are from actual automobile petrol engines. Working model designed to demonstrate the student's operation of a typical electronic ignition system used in cars.

In order to show the spark generation & firing order, the distributor is driven by a low-speed electric motor.

FEATURES:

This includes all the individual components of the system presented on a steel turret so that each component can be clearly identified.

Visualization of Spark & Firing order.

Electric motor for driving the distributor.

Demonstration model consisting of actual components used in Automobiles.

SPECIFICATION:

All brand new components

Distributor with hall effect sensor

Fault box with 4 faults

Ignition control module

Ignition coil

Spark plugs and plug wires

Test points for diagnosis
