

Product Name :
Data Acquisition Card - Data Acquisition Lab**Product Code :**
DAT0002 LAB ENGINEERING**Description :**

Data Acquisition Card

Technical Specification :

Data Acquisition System is very useful for sensing and controlling Analog and Digital signals for any process. It facilitates the interfacing of real world signals with PC through USB bus. Screw terminals are provided for easing connections. All pins are multi-functional and user can change the operation of selected pins as per the requirement.

Product Features

- 4 Analog Inputs
- 2 Analog Outputs
- 22 digital Inputs and outputs
- Two unity gain amplifiers given to strengthen the weak signal from any sensor
- User can change I/O as per need
- Removable screw terminals for easy signal connectivity
- User can make desired software by using VB6 or VB.net
- Multifunction board to control from PC using USB
- User friendly software
