

Product Name :
Training System Pneumatics

Product Code :
EELELABT10037

Description :

Training System Pneumatics

Technical Specification :

Description & Specification:

We are manufacturing Training System Pneumatics technology. One look and you will see that it does not look like the other pneumatic trainers on the market. You will notice the rod less cylinder at the top that carries the vacuum cup, the double rod cylinder as well as the twin rod cylinder. All components are industrial standard. The text lab manual walks students through the fundamentals of pneumatics and pneumatic circuits. Electrical control is taught using a variety of Solenoid valves. These solenoid valves may be actuated by on board switches or by using a PLC. This system is suitcase mounted and totally self-contained. It contains an internal compressor with accumulator, a 24 volt dc power supply, associated switches and power connections.
