Product Name:

Bending Moment Apparatus

Product Code: ELAB-APL0001

Description:

Bending Moment Apparatus

Technical Specification:

The long and short sections of the teak wood beam are connected by hinge.

A spring balance with adjusting screw mounted at a fixed distance enables one to calculate the bending moment for any load position.

Another special attachment with an adjustable screw is also provided.

This along with a spring balance and its adjustable screw is used for determining the shear force at the hinge section.

SPECIFICATIONS:

Beam - 1 mtr. span with supports.

Bending moment measurement arrangement.

Shear force measurement arrangement.

Spirit level to restore the loaded beam to original position.

Weight set with loading hangers.

The technical manual accompanies the unit.

RANGE OF EXPERIMENTS:

Determination of shear force for different loading conditions.

Determination of bending moment for different loading conditions.

Influence line diagram for bending moment & shear force.
