

Product Name :
Compound Pendulum**Product Code :**
ELAB-APL0006 LAB ENGINEERING**Description :**

Compound Pendulum

Technical Specification :

The apparatus is designed to study the time period and frequency of compound pendulum.
The unit consists of a metallic rod on which metallic balls are fitted on different locations.
A pendulum consists of a cord which has mass at its one end and it is tied to a pivot point on the other end.
The rod is pivoted at any desired point.
