

Product Name :
Thermal Conductor**Product Code :**
ELAB-ENG-10-0007 LAB ENGINEERING**Description :**

Thermal Conductor

Technical Specification :

The apparatus is designed to determine thermal conductivity of different liquids.
The apparatus consists of a heater. The heater heats a thin layer of liquid.
A cooling plate removes heat through liquid layer, ensuring unidirectional heat flow.
Temperature is measured across the liquid layer and complete assembly is properly insulated.
A proper arrangement for changing the liquids is provided. The whole assembly is kept in a chamber.
